Key Projects

MetaCampus :

- A virtual education platform inspired by metaverse that fosters interactive and immersive education, socialization, and real-time collaboration for students as well as educators.
- Designed to act as a viable alternative to traditional, in-person schools and colleges, especially during challenging situations like COVID-19 lockdowns or adverse weather conditions.
- The platform helped in engaging students, particularly younger learners by adding interactive and entertaining elements in the curriculum, unlike traditional approach.
- Helped easily attain those online education systems which are not universally accessible.
- Technology Stack: C#, Unity Engine, Firebase, Photon.

CrypCoin :

- A Blockchain based Cryptocurrency transacting system providing a one stop platform for learning as well as managing crypto transactions.
- Helped building a centralised platform wherein user can learn as well as trade cryptocurrencies for free, for which existing system charge.
- User is able to analyze the real-time worth of his/her assets with the user-friendly GUI, with no stress of financial losses.
- Technology Stack : Next.js, Metamask, Sanity.

RFID Based Attendance System :

- Developed an attendance system with the help of RFID sensors that provide seamless identification registration of attendees using IOT technology.
- It provided fully automated and secured attendance system convenient to traditional methods.
- Reduces truancy in universities by helping administration monitor all the attendees data, thereby improving regularity and discipline in attendees.
- Technology Stack : XAMPP server, MySQL, ESP-32 microcontroller.
